

## SIDS and SUDC Facts and Figures

The Lullaby Trust's definition of sudden infant death syndrome and sudden unexplained death in childhood:

The sudden and unexpected death of a baby is usually referred to by professionals as 'sudden unexpected death in infancy' (SUDI) or 'sudden unexpected death in childhood' (SUDC), if the baby was over 12 months old. The death of a baby that is unexpected is also sometimes referred to as 'sudden infant death'.

Some sudden and unexpected deaths can be explained by the post-mortem examination, revealing, for example, an unforeseen infection or metabolic disorder. Deaths that remain unexplained after the post-mortem are usually registered as 'sudden infant death syndrome' (SIDS) or 'sudden unexpected death in childhood' (SUDC) in a child over 12 months. Sometimes other terms such as SUDI or 'unascertained' may be used.

In 2022, there were 446 **unexpected** deaths in England and Wales and 10 in Northern Ireland. This data is not differentiated for Scotland.

There were 189 **unexplained** deaths of babies and young children in the whole of the UK.

### Deaths < 1year of age\*

	England & Wales	Scotland	N. Ireland	UK Total	UK Rate (per 1000 live births)
<b>2012</b>	234	29	2	265	0.39
<b>2013</b>	252	17	9	278	0.41
<b>2014</b>	217	14	4	235	0.35
<b>2015</b>	195	21	4	220	0.33
<b>2016</b>	226	18	6	250	0.37
<b>2017</b>	189	15	2	206	0.31
<b>2018</b>	213	28	4	245	0.36
<b>2019</b>	187	23	4	214	0.32
<b>2020</b>	162	14	4	180	0.27
<b>2021</b>	189	15	1	205	0.30
<b>2022</b>	171	16	2	189	0.28

Most sudden unexplained deaths of children occur in babies aged under one year. In the UK in 2022, 6% of sudden unexplained deaths of children under 2 were amongst children aged 12-24 months.

\* Data collected from Office for National Statistics (ONS), National Records of Scotland (NRS) and Northern Ireland Statistics and Research Agency (NISRA)

### **England & Wales 2022**

171 unexplained infant deaths occurred in England and Wales in 2022, a rate of 0.28 deaths per 1,000 live births, a decrease from 0.30 deaths per 1,000 live births in 2021.

Of these, 91% occurred within the first 6 months of life.

The rate of SIDS in low birthweight (2.5kg or 5½ lbs) babies was 4 times higher than babies born over this weight.

65% were boys (0.36 deaths per thousand live births). This is an increase from 63% in 2021.

The rate of unexplained infant deaths was almost 3 times higher in mothers aged under 20 years compared to all other age groups.

### **Statistician's Comment:**

The ONS noted that, whilst there are often long delays in investigation and registration of these deaths, there has been an increase in late registrations in recent years, with late registrations representing less than 4% of unexplained infant death registrations between 2013, rising to 12.2% in 2021.

**Since the launch of the Back to Sleep Campaign in England and Wales in 1991, the number of SIDS deaths has fallen by 80%, saving the lives of more than 30,000 babies.**
